translation elongation factor EF-Tu - Streptococcus oralis

```
C. Accession: D95173

R. Tettelin, H.; Nelson, K.E.; Paulsen, I.T.; Eisen, J.A.; Read, T.D.; Peterson, S.; Heid on, J.D.; Umayam, L.A.; White, O.; Salzberg, S.L.; Lewis, M.R.; Radune, D.; Holtzapple, nson, T.; Hickey, E.K.; Holt, I.E.
Science 293, 498-506, 2001
A.; Authors: Loftus, B.J.; Yang, F.; Smith, H.O.; Venter, J.C.; Dougherty, B.A.; Morrison, A.; Title: Complete Genome Sequence of a virulent isolate of Streptococcus pneumoniae.
A; Reference number: A95000; MUID:21357209; PMID:11463916
A; Accession: D95173
A; Status: preblamary
A; Molecule type: DNA
A; Residues: 1-398 KUR>
A; Residues: 1-398 KUR>
A; Experimental source: strain TIGR4
C; Genetics: A; Genetics: Sp1489
C; Superfamily: translation elongation factor Tu; translation elongation factor Tu homolc
                                                                                                         Riudwig, W.; Welzeneger, M.; Betzl, D.; Leidel, E.; Lenz, T.; Ludvigsen, A.; Moellenhond, W.; Welzeneger, M.; Betzl, D.; Leidel, E.; Lenz, T.; Ludvigsen, A.; Moellenhond. 153, 241-247, 1990
ArTitle: Complete nucleotide sequences of seven eubacterial genes coding for the elongat A; Mitches nucleotide sequences of seven eubacterial genes coding for the elongat A; Maccession: F60663; MUD:90240875
A.Accession: F60663 MUD:90240875
A.Status: not compared with conceptual translation
A.Molecule type: DNA
A.Residues: 1-398 <LUD>
A.Residues: 1-398 <LUD>
A.Residues: 1-398 <LUD>
A.Status: Translation elongation factor Tu; translation elongation factor Tu homology (S.Superfamily: translation elongation factor Tu homology (ETU)
B.;13-142/Domain: translation elongation factor Tu homology (ETU)
B.;13-142/Region: GTP-binding MXXD motif
B.;17-179/Region: GTP-binding SAK/L motif
B.;17-179/Region: GTP-binding site: Mg-GTP (Lys, Thr, Thr, Asn, Lys, Asp, Ser) #sta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               translation elongation factor Tu [imported] - Streptococcus pneumoniae (strain TIGR4) C; Species: Streptococcus pneumoniae C; Species: 03-Aug_2001 #sequence_revision 03-Aug-2001 #text_change 24-Aug-2001

SERREAL INFORMATION:

APPLICANT: CLOUGH, BARBARA

APPLICANT: WILSON, ROBERT

TITLE OF INVENTION: AN EFT TU PROTEIN ENCODED ON THE PLASTID DNA OF THE

TITLE OF INVENTION: AN EFT TO PROTEIN SYNTHESIS INHIBITORS

TITLE OF INVENTION: BFRECTIVE AS ANTI-MALARIAL COMPOUNDS

FILE REPRESENCE: N68837B GCW PJC DP

CURRENT APPLICATION NUMBER: US/09/140,466

CURRENT FILING DATE: 1999-08-28

EARLIER PILING DATE: 1999-08-28

                                                                                                                                                                                                                                                                                                                                                                                                                                              Squence 4, Application US/09174768

Patent No. 6265185

GENERAL INFORMATION:
APPLICANT: Muller, Sven
APPLICANT: Dalbage, Henrik
TITLE OF INVENTION: No. 6265185el Yeast Promoters Sultable For Expres
TITLE OF INVENTION: No. 6265185el Yeast Promoters Sultable For Expres
TITLE OF INVENTION: Heterologous Expression of Proteins in Yeast
FILE REFERENCE: 4791.204-US
CURRENT FILING DATE: 1998-10-19
EARLIER FILING DATE: 1998-10-19
EARLIER FILING DATE: 1996-05-21
NUMBER OF SEQ ID NOS: 6
SOFTWARE: FastSEQ for Windows Version 3.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                .;

Patent No. 6316250

GENERAL INFORMATION:

APPLICANT: Hjelle MD, Brian

APPLICANT: Jenison, Steve

TITLE OF INVENTION: Molecular Clones Producing Recombinant DNA Antigens of

TITLE OF INVENTION: Molecular Clones Producing Recombinant DNA Antigens of

TITLE OF INVENTION: Hjelle et al. (210312.0009)

FILE REFERENCE: 10312-801, Hjelle et al. (210312.0009)

CURRENT APPLICATION NUMBER: US/09/106,075A

CURRENT FILING DATE: 1994-03-22

PRIOR FILING DATE: 1994-03-22

PRIOR FILING DATE: 1993-09-13

The present sequence represents the Verminal of the 50 kD protein. The proteins and purified peptides derived from them can be used (by active immunisation) to treat or prevent H. pylori infections (gastritis, peptic ulcers, gastric cancer etc.). Antibodies raised against the protein can be used for psssive immunisation. Derived peptides and antibodies are also useful as reagents for diagnostic immunoassays, and antibodies are further useful for affinity purification of the new proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New Helicobacter pylori membrane proteins - and related polypeptide(s) and antibodies, useful for active or passive immunisation and diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    membrane protein; vaccine; immunisation; immunoassay;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This is the N-terminal sequence of a 50 kDa protein, designated GHPO 750, isolated by immunoaffinity chromatography from a membrane fraction of Helicobacter pylori ATCC 43579. The invention provides Helicobacter polypeptides (see AMV73022-32 and AAMV33034-35) and polynucleotides (see AAAV2001, AAV07912-11 and AAV07963-64) that can be used in methods for the treatment and prevention of Helicobacter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are scherichia coli, Staphylococcus aucres, Salmonella typhi, Klebsiella preumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also used in the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen corrections of the monitogous nucleic acids sequence is also useful to screen corrections and to obtain antibodia acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic from a directly from WIPO at the wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Escherichia coli; E. coli; proliferation; inhibition; screening; antimicrobial; bacterial growth; antisense therapy; antibacterial.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             E. coli proliferation associated protein sequence SEQ ID NO:247.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polynucleotides for the identification and development
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antibiotics, comprise sequences of antisense nucleic acids

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 염
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  图片
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              XXXX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This is the amino acid sequence of a 50 kDa Helicobacter pylori polypeptide designated GHPO 750. It was deduced from an isolated genomic DNA sequence (see AAV07963). The invention provides a family of 76 kDa Helicobacter polypeptides (see AAW73022-32), as well as GHPO 750 and a 32 kDa polypeptides (see AAW73034), and also polynucleotides (see AAV72001, AAV073012-21 and AAV07963-64) encoding them, expression cassettes, and methods for producting the unprocessed mature polypeptides in host cells. The polypeptides can be used in waccination methods to prevent or treat Hb Infection in a mammal. Methods and products of the invention allow treatment and prevention of gastroduodenal diseases associated with Hb
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated Helicobacter polynucleotides - used to develop products for the diagnosis, prevention and treatment of Helicobacter infections and gastroduodenal diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and ducdenal ulcers. Detection and diagnostic methods are also provided. GHPO 750 was demonstrated to be a protective antigen. Unlike the other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        demonstrated to be a protective antigen. Unlike the other polypeptides of the invention, GHPO 750 is not a secreted protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        95.9%; Score 118; DB 19; Length 399; 100.0%; Pred. The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are care themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus auceus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The cinvention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in cay wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAA65809 to AAA65889 and AAA66058 to AAA66138 represent nucleotide sequences derived from Escherichia coli which inhibit E. coli proliferation. AAA65890 to AAA66055 and AAB15806 to AAB16040 represent nucleotide and protein sequences associated with E. coli proliferation. AAA66057 represent primers used for sequencing E. coli proliferation inhibiting nucleotide inserts in an example from the present invention. Methods from the present invention can be used to identify a proliferation. required gene in a microorganism, by contacting a microorganism with a proliferation-required gene activity inhibitory inhibition occurs in the second microorganism, and determining if inhibition occurs in the second microorganism. The nucleic acid sequences identified as being required for bacterial growth and proliferation, can be used for antisense therapy for killing bacteria.
                                                                                                                                                                                                                                                   Carr GJ;

programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery
                                                                                                                                                                                                                                                                                                                                           New polynucleotides for the identification and development of antibiotics, comprise sequences of antisense nucleic acids -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella preumoniae, Pseudomonas aeruginosa and Enterococcus facealis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acids which are required for cell proliferation in essential prokaryotic cellular proliferation protein.

The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at they wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Riebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Coryneform bacterium; amino acid synthesis; vitamin; saccharide;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are scherichia coli, Staphylococcus aucus. Salmonella typhi, Klebsiella preumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to invention antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the wile wile and the printed specification, but was obtained in electronic fitp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella comenuoniae, Pseudomonas aeruginosa and Enterococcus facerils. The Escherichia is also useful for the identification of potential new targets invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to obtain antibodies capable of binding to the expressed proteins. The proteins can be used in proliferation, to the expressed proteins. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteriu are useful for producing amino acids, nucleic acids, vitemins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office.
                                                                                                                                                                                                                                                                                                                   Novel polynucleotides derived from Coryneform bacteria, for identifying
                                                                                                                                                                                                                                                                                                                                      mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus facealis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to antibiotic development. The antisense nucleic acids can also be used to obtain antibodies capable of binding to the expressed proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen of in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part to the printed specification, but was obtained in electronic for the printed specification, but was obtained in electronic for the printed specification, but was obtained in electronic form part
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence of translation elongation factor Tu2 encoded by tuf2 gene.
                                                                                                                                                                                                                                                                                                                          New polynucleotides for the identification and development of antibiotics, comprise sequences of antisense nucleic acids -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel annibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella premoniae, Pseudomansa aeruqinosa and Enterococcus facealis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.

Conter The sequence data for this patent did not form part for the printed specification, but was obtained in electronic form the property of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

microorganism. This protein also has the ability to catalyse the transfer of aminoacyl-tRNA to a ribosome A site, and has a molecular weight of about 45 kD as determined by SDS-PAGE. The primers used to isolate the DNA encoding this sequence can also be used to detect the EF-Tu gene. The primers are also used for the highly accurate detection of microorganisms of the genus Lactobacillus, by specifically detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Substitution of residue 378 of the elongation factor (EF-Tu) with a valine, threonine, proline or phenyalanine results in an elfamycin resistant protein (EF-TuR). The advantage of this change is that the limiting factor for the prodn. of elfamycin by actinomycetes is removed by mutating the gene tuf into tuff encoding a protein, resistant to the elfamycin, pref. mocimycin (Kirromycin). The inventors claim EF-TuR and the genes (tuff) encoding it.
                                                                                                                                                                                                                                                                                                                                                                                          Sequence of translation elongation factor Tul encoded by tufl gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ψ.,
                                                                                                                                                    Length 396;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 396;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Heinstra

The DNA encoding this sequence was isolated from Lactobacillus paracasel subspecies paracasel using the primers shown in AAT92&20 and AAT92&21. This sequence is involved in the polypeptide chain elongation reaction in the blosynthesis of proteins in a Lactobacillus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Tu; EF-Tu; Lactobacillus; polypeptide chain elongation;

                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                      valine, threonine, proline or phenyalanine results in an elfamycin resistant protein (EF-TuR). The advantage of this change is that the limiting factor for the prodn. of elfamycin by actinomycetes is removed by mutating the gene tuf into tufR encoding a protein, resistant to the elfamycin, pref. mocimycin (Kirromycin). The inventors claim EF-TuR and the genes (tufR) encoding it.
                                                                                                                                                                                                          Substitution of residue 378 of the elongation factor (EF-Tu) with a

Substitution of residue 378 of the elongation factor (EF-Tu) with a valine, threonine, proline or phenyalanine results in an elfamycin resistant protein (EF-TuR). The advantage of this change is that the limiting factor for the prodn. Of elfamycin by actinomycetes is removed by mutating the gene tuf into tufR encoding a protein resistant to an elfamycin, pref. mocimycin (Kirromycin). The inventors claim EF-TuR and the genes (tufR) encoding it.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 elfamycin-resistant elingation factor EF-TuR Pro 378

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Substitution of residue 378 of the elongation factor (EF-Tu) with a valine, threonine, proline or phenyalanine results in an elfamycin resistant protein (EF-TuR). The advantage of this change is that the limiting factor for the prodn. Of elfamycin by actinomycetes is removed by mutating the gene tuf into tufR encoding a protein resistant to elfamycin, pref. mocimycin (Kirromycin). The inventors claim EF-TuR and the genes (tufR) encoding it.

    ţ,
the limiting factor for the prodn. of elfamycin by actinomycetes removed by mutating the gene tuf into tuff encoding a protein resistant to an elfamycin, pref. mocimycin (Kirromycin). The inventors claim EF-TuR and the genes (tufR) encoding it.
